

doubling time in exponential pdf

The doubling time is the period of time required for a quantity to double in size or value. It is applied to population growth, inflation, resource extraction, consumption of goods, compound interest, the volume of malignant tumours, and many other things that tend to grow over time. When the relative growth rate (not the absolute growth rate) is constant, the quantity undergoes exponential ...

Doubling time - Wikipedia

Exponential growth is exhibited when the rate of change—the change per instant or unit of time—of the value of a mathematical function is proportional to the function's current value, resulting in its value at any time being an exponential function of time, i.e., a function in which the time value is the exponent. Exponential decay occurs in the same way when the growth rate is negative.

Exponential growth - Wikipedia

Every twelve to eighteen months, computers double their capabilities, and so do the information technologies that use them. Governments and the largest companies in the world use Ray Kurzweil's historical trends of exponential growth charts for predicting the future.. The chart to the left shows the improvement level that our technology will have during the next five years.
