Waste water treatment is a process used to convert wastewater into an effluent that can be returned to the water cycle with minimum impact on the environment, or directly reused. The latter is called water reclamation because treated wastewater can then be used for other purposes. The treatment process takes place in a wastewater treatment plant (WWTP), often referred to as a Water Resource ...

Research Highlights Different methods used for the treatment of brewery wastewater were compared. Only reverse osmosis can be used individually with good efficiency. Coupling different processes together would be more appropriate for treating brewery wastewater for re-use.

3. Ammonia Stripping Application in Industrial Wastewater Treatment. To date, ammonia stripping pilot-plants have been employed to treat various types of wastewater containing high concentrations of ammonia and toxic compounds, such as that derived from secondary effluent of municipal wastewater treatment plant [], animal manure [], and landfill leachate [].
