Phytohormones are chemical messengers that coordinate cellular activities. This lecture introduces the plant hormones (auxin, cytokinin, gibberellic acid, brassinosteroids, ethylene, abscisic acid, salicylic acid and jasmonic acid) through their roles, during the plants life, from seed-to-seed.

### **Introduction to Phytohormones | Plant Cell**

hormones (phytohormones) are fewer in number, usually affect most if not all cells, and trigger diverse responses. Furthermore, the accumulation and effects of each phytohormone are modulated by environmental and developmental influences as well as the activities of other phytohormones. Unraveling the complex

An Overview of Plant Growth Regulators - Plant Hormones (Phytohormones) : Auxins, Gibberellins, Cytokinins, Ethylene and ABA. Thimann (1948) proposed the term phytohormones. As these hormones are synthesis by plants, they are also called phytohormones. These are certain synthetic chemicals which are similar to phytohormones in structure and function.
