

plant hormone signaling systems pdf

The word hormone is derived from Greek, meaning set in motion. Plant hormones affect gene expression and transcription levels, cellular division, and growth. They are naturally produced within plants, though very similar chemicals are produced by fungi and bacteria that can also affect plant growth. A large number of related chemical compounds are synthesized by humans.

Plant hormone - Wikipedia

A plant grows fastest at the top, makes lateral shoots and roots, leaves that turn to the light, flowers and fruits in all their forms. These developments are set in motion by the plant hormone auxin.

Genome archaeologists uncover the origin of a plant hormone

A hormone (from the Greek participle *hormō*, "to set in motion, urge on") is any member of a class of signaling molecules produced by glands in multicellular organisms that are transported by the circulatory system to target distant organs to regulate physiology and behaviour. Hormones have diverse chemical structures, mainly of 3 classes: eicosanoids, steroids, and amino acid ...
