The most often used method to produce high quantities of expandable beads of polystyrene is the
suspension-polymerisation with a blowing agent .This process consists of two steps, namely the
polymerisation where the granules are formed and the addition of pentane and/or other blowing agents,
which diffuse into the granules .After this process the beads are sieved to get several fractions with ...

Past and present developments in polymer bead foams and

Advances in the Emabond™ Induction Welding Process for High- Performance Assembly of Demanding
Thermoplastics Russell J. Nichols, PE Ashland Specialty Chemical Co. Abstract Electromagnetic (or
induction) welding of thermoplastics is a simple, rapid and reliable
