

prenatal testing and screening pdf

Prenatal testing consists of prenatal screening and prenatal diagnosis, which are aspects of prenatal care that focus on detecting problems with the pregnancy as early as possible. These may be anatomic and physiologic problems with the health of the zygote, embryo, or fetus, either before gestation even starts (as in preimplantation genetic diagnosis) or as early in gestation as practicable.

The newest form of prenatal testing for Down syndrome is regularly referred to as testing cell free fetal DNA. At the recent American College of Medical Genetics (ACMG) annual meeting it was made clear that, in fact, what is mostly being tested is placental DNA. Perhaps using precise language would make clear that NIPT remains a highly accurate screening test, not a diagnostic test, since it ...
