Foreword The environment in which we conduct operations is characterized by four clear trends: growing uncertainty, rapid change, increased competitiveness, and greater decentralization.

THE OPERATIONS PROCESS

The engineering design process is a methodical series of steps that engineers use in creating functional products and processes. The process is highly iterative - parts of the process often need to be repeated many times before another can be entered - though the part(s) that get iterated and the number of such cycles in any given project may vary. ...

From the curators: The United States Military's Army Publishing Directorate has been producing combined field manuals since 1905, and branch manuals since even earlier. Many hundreds are in use at any one time as guidebooks on everything from ordnance to operations for military personnel serving in the field.

Design is the creation of a plan or convention for the construction of an object, system or measurable human interaction. Design has different connotations in different fields (see design disciplines below). In some cases, the direct construction of an object (as in pottery, engineering, management, coding, and graphic design) is also considered to use design thinking.
