Finding the shortest route between two points in a network by T. A. J. Nicholson* A new method is proposed for finding the shortest route between two points in an interconnected network. The shortest route is found by investigating a selection of routes from both the starting point and the terminal point.

The Shortest Possible Route to Nibbana Uggasena, who became an Arahant after performing stunts on the top of a bamboo pole, when the Buddha taught him the Dhamma. However, even during the Buddha's time, such cases were exceptional. Others had to listen to a long discourse, or they had to practice meditation for years before attaining the Path.

Chapter 490 Shortest Route Introduction Given a directed network defined by nodes and arcs, this procedure finds the shortest route between two specified nodes. One example of the need for such an algorithm is to be used in a GPS device to find the shortest route between two locations.

The Shortest Route to Nibbana I suppose that most who wish to attain the end of suffering would like to do so as quickly and easily as possible. To that end I will relate the story of Bahiya Darucariya, who was extolled by the Buddha as the one pre-eminent in the speed of attainment (khippabhiññāna'f).
