In mathematics, a homothety (or homothecy, or homogeneous dilation) is a transformation of an affine space determined by a point S called its center and a nonzero number k called its ratio, which sends P to $kP + (1-k)S$, in other words it fixes S , and sends any M to another point N such that the segment SN is on the same line as SM , but scaled by a factor k . In Euclidean geometry homotheties are the ...
